**Important risks:** The fund is actively managed and its characteristics can vary. The fixed income securities in which the fund invests can vary in price depending on the market conditions. Among the risks of fixed income investments there exists the risk of an increase in interest rates and credit risk. Normally, when interest rates increase, the price in fixed income securities proportionally decreases. On the other hand, credit risk refers to the possibility that the bond issuer is not able to pay the interest or initial investment creating a financial loss to the fund and consequently to the investor. Although the fund only invests in fixed income securities that are issued in US dollars, international investments imply specific risks, including but not limited to monetary fluctuations, lack of liquidity, and volatility of the investment. These types of risks are present in emerging markets investments. High Yield Bonds are more prone to fluctuations in price and the risk of the issuer not being able to repay the debt. The interested investors should consult the informative prospectus that is available in the offices of MMG Bank Corporation. This factsheet does not represent an investment recommendation in the fund.
